Furthermore, you aim to establish a healthy, safe, sustainable and challenging working environment balancing the short and long-term goals.

Responsibilities

- Manage people development and work atmosphere in cooperation with HR.
- Coach, manage and develop direct reports.
- Report operations costs per department and per project vs budget.
- Allocate (project) resources to specific projects in consultation with direct reports.
- Manage and/or improve operational efficiency and drive continuous improvement.
- Focus on profitability levels and where possible on improvements.
- Set up and manage the standards for SLAs with suppliers.
- Manage, monitor and reduce cost and inventory levels.
- Manage compliance with industry regulations, laws and governmental regulations.
- Ensure transport/export processes documents and insurances are timely and properly organized and processed.
- Define and monitor the required or intended certifications (ISO).

What do you bring?

- A firm personality, with execution power and good people management skills.
- Knowledge in the field of Engineering, Manufacturing, Project management and Supply Management.
- Experience with: SHEQ, Good Manufacturing Practice or similar, methods on cost calculating and pricing strategy, ERP Systems.
- A minimum of 5 years of experience in a managerial job in the primary processes of an organization within or related to the pharmaceutical industry.
