Type of contract	Temporary/ permanent

General Introduction Company

Inno4 Life, part of the DEC group, is a growing organization located in Breda, the Netherlands and offers a complete range of solutions in Equipment & Support, System Integration, System Optimization and independent Expert Advice in the Pharmaceutical and Bio-Tech business. Inno4Life has a well-known customer's base inside and outside of the Netherlands and has built a solid network of a selected group of strong partners. Due to the growth of the company we are looking for a Project Manager, who feels attracted to a fast growing business in a niche segment in the pharmaceutical and Bio-Tech industry.

The focus of the Operations Department is on development of new equipment, optimizing the quality of our internal processes, costs, and providing fast and excellent products and services to our customers.

The informal and international company culture emphasizes integrity, trust, respect and commitment. Are you the customer and result oriented professional who can contribute expertise to our team?

Purpose of the position

The project manager will manage multiple projects from start to finish, taking into account the customer requirements, the financial parameters, the technical parameters, the projected time lines and quality specifications.

The Project Manager will coordinate all the different disciplines in multiple project(s).

Tasks and responsibilities:

- Manage project(s) on time, within specifications and budget;
- Select the right expertise for projects in collaboration with the different functional owners;
- Monitor progress of the different engineering activities against planning and budget;
- Monitoring of production and test engineering activities, against planning and budget;
- Monitoring of installation engineering activities against planning;
- Coordinate deviations from planning, budget, time lines and/or specifications with functional owners and management;
- Liaising with the customer on progress, planning and issues (technical, costs, quality) during the development, production, testing, and installation phase;
- Managing the project team (members);
- Managing Engineering through the Chief Engineer on the progress of the engineering activities and technical issues;
- Follow agreed and existing procedures and protocols;
- Complying with laws, regulations, and guidelines within the pharmaceutical industry;
- Liaise with Sales on communicating and managing change orders with the customer;
- Proactively schedule, prepare and manage the FAT and SAT, communicate timely internally (intranet);
- Evaluate the project, document and share the learnings at the correct level.

Job requirements:

- 6-10 years relevant work experience;
- Project Management principles;
- Engineering;

Job profile

- Quality principles;
- Finance;
- Planning.
- Business acumen
